

"Experience of Global Education..... World Impact "

GREEN PEACE LINCOLN COLLEGE

(Affiliated to Lincoln University College, Malaysia)

Itahari, Sunsari, Nepal

FACULTY OF MBA/BBA/BIT

ASSIGNMENT COVER PAGE

Please fill in all the required details for your assignment to be accepted.

Student's Name	Nirmal	Shankar		
Year/Semester	Third	Six	Intake	2023
Program	BIT			
Subject Name/ Code	Values & Ethics in Profession	BIT 366		
LC Number	LC00023000816			
Lecturer's Name	Rajiv	Rimal		
Assignment Title (1) (2)	Technology Globalization			
No. of Page (excluding this page)	9			
Required Words	1300-1500		Actual # of words	1436
Soft Copy Included		Yes ☐	/ No ☐	

DECLARATION BY STUDENTS:

I Certify that assignment is my own work in my own words. All resources have been acknowledged and the content has not been previously submitted for assessment to **LINCOLN** or elsewhere. I also confirm that I have kept a copy of this assignment.

Signed: _____

Date:

1. Introduction

Technology globalization refers to the spread and use of technology across countries and regions. It enables people, businesses, governments, and organizations to connect and share information through the internet, digital platforms, cloud computing, artificial intelligence (AI), and communication systems. Technology globalization has changed how people live, work, study, and communicate. Businesses can operate internationally, students can access global educational resources, and organizations can communicate with customers and partners worldwide.

Developing countries such as Nepal can benefit from global technologies through access to modern tools, knowledge, digital services, and international markets. However, technology globalization also creates challenges, including data privacy, cybersecurity threats, digital inequality, job displacement, cultural changes, and ethical concerns related to AI (UNESCO, 2022).

1.1 Statement of the Problem

Technology is developing rapidly and spreading across national borders. Although technology globalization provides many opportunities, access to technology is not equal. Differences in internet access, digital skills, infrastructure, and economic conditions create a digital divide between developed and developing countries.

Technology globalization also creates concerns about data privacy, cybersecurity, online fraud, misinformation, and automation-related job displacement. Developing countries may become dependent on foreign technologies and companies. Therefore, appropriate policies and responsible use of technology are necessary to maximize benefits while reducing negative effects.

1.2 Objectives of the Study

- To explain the concept of technology globalization.
- To identify the major benefits of technology globalization.
- To examine the ethical and social challenges of technology globalization.

1.3 Significance of the Study

This study is important because technology globalization directly affects modern society and economic development. It helps students understand how technology connects countries and creates opportunities. It can also help organizations and policymakers understand digital inequality, cybersecurity, privacy, and ethical technology use. For Nepal, understanding technology globalization can support digital development, education, business, and employment.

1.4 Limitations of the Study

- The study is mainly based on secondary sources.
- No interviews or surveys were conducted.
- The study focuses mainly on technology globalization and its relevance to Nepal.
- Rapid technological changes may affect some information over time.
- The study cannot cover every aspect of technology globalization in detail.

2. Methodology

This study uses a qualitative and descriptive research approach. Information was collected from secondary sources, including research articles, international organizations, professional standards, government documents, and reliable online sources. The information was reviewed and analyzed to understand the benefits, challenges, ethical issues, and importance of technology globalization. The study also considers its effects on Nepal's economy, education, businesses, and society.

3. Results and Discussion

3.1 Ethical Challenges of Technology Globalization

Technology globalization has made communication and information sharing easier, but rapid technological development has also created ethical concerns.

Artificial Intelligence and Human Responsibility

AI is increasingly used in banking, healthcare, education, and business. Although AI can improve efficiency, incorrect or biased decisions may cause serious harm. AI can also automate certain tasks and affect employment. UNESCO emphasizes human rights, fairness, transparency, and responsible governance in AI development (UNESCO, 2021). Therefore, humans should remain responsible for important decisions supported by AI.

Privacy and Protection of Personal Data

Digital services collect personal information such as names, photographs, locations, financial details, and online activities. Improper protection can result in misuse, unauthorized access, or data theft. Organizations should therefore apply appropriate security controls and clearly explain how personal information is collected and used. Nepal's Privacy Act, 2075 (2018), provides legal protection for privacy and personal information (Government of Nepal, 2018).

Bias in Technology

Technology does not always produce fair results. AI systems learn from data, and biased data can produce biased outcomes. Such bias may affect people differently based on language, culture, or background. UNESCO identifies bias, discrimination, inequality, and digital divides as important ethical concerns in AI (UNESCO, 2021).

3.2 Relevance to Nepal's Technological Development and Professional Practice

Technology globalization has created opportunities for Nepal in communication, online education, digital banking, e-commerce, and employment. However, Nepal also faces challenges in adopting global technologies.

Use of International Technologies

Many Nepali organizations use software, cloud services, and digital platforms developed by international companies. These technologies provide useful services but may not always fully consider Nepal's language, culture, infrastructure, or local

requirements. Therefore, organizations should evaluate technologies before widespread implementation.

Data Privacy in Nepal

The Privacy Act, 2075 (2018), recognizes privacy and provides protection for personal information and data (Government of Nepal, 2018). Organizations should improve privacy awareness and security practices, especially when data is stored or processed through international services.

Professional Responsibilities

Nepali IT professionals may work on both local and international projects and may handle sensitive information. Therefore, they should develop not only technical skills but also professional ethics. They should protect user information, maintain cybersecurity, consider fairness, and understand the social effects of their systems.

3.3 Evaluation of Global Technology Governance

International frameworks provide guidance for responsible technology use.

Framework	Main Purpose	Importance for Nepal
GDPR	Protects personal data and strengthens individual control over information.	Provides a useful model for improving privacy practices.
UN Global Compact	Promotes human rights and responsible business practices.	Encourages socially responsible technology development (UN Global Compact, 2026).
ISO/IEC 27001	Provides requirements for information security management systems.	Helps organizations manage cybersecurity and data-security risks (ISO, 2022).

These frameworks are valuable, but Nepal also needs stronger awareness, local policies, skilled professionals, and effective implementation.

3.4 Ethical Analysis of a Technology Problem in Nepal

Example: Facial Recognition Technology

Facial recognition can be used for identification and security. However, improper use may create privacy and surveillance concerns.

Deontological Approach

This approach focuses on rights and duties. Using facial recognition without proper legal authority, transparency, or privacy safeguards may violate individual rights. Organizations should therefore respect privacy and follow applicable laws.

Utilitarian Approach

This approach considers overall benefits and harms. Facial recognition may improve public safety, but inaccurate identification could result in innocent people being questioned or wrongly identified. Therefore, its use should be justified when expected social benefits outweigh potential harms.

Facial recognition should consequently be used only with appropriate laws, transparency, security controls, and privacy safeguards.

3.5 Practical Recommendations

The following measures can help Nepal gain greater benefits from technology globalization:

- **Improve Data Protection:** Organizations should use strong security controls to protect personal information.
- **Increase Digital Awareness:** People should receive education about cybersecurity, privacy, and responsible technology use.
- **Develop Local Technology:** Nepal should encourage technologies that consider local languages, culture, and social needs.
- **Strengthen IT Policies:** Government policies should address AI, cybersecurity, privacy, and digital services.

- **Promote Professional Ethics:** IT professionals should follow ethical principles and accept responsibility for their systems.
- **Provide Technical Education:** Educational institutions should teach both technical and ethical skills.
- **Reduce the Digital Divide:** Internet access, digital infrastructure, and digital services should be expanded to rural and less-developed areas.

Overall, technology globalization can support Nepal's development, but its benefits depend on responsible adoption, strong security, ethical practices, and inclusive access.

4. Conclusion

Technology globalization has made the world more connected by allowing technology, information, knowledge, and digital services to spread across national borders. It provides many benefits, including better communication, improved education, international business opportunities, employment, and economic development.

However, it also creates challenges such as cybersecurity threats, data privacy problems, digital inequality, misinformation, job displacement, and dependence on foreign technologies. Nepal can gain significant benefits from technology globalization by improving digital infrastructure, developing skilled human resources, strengthening cybersecurity, and promoting responsible use of technology.

Therefore, technology globalization should be managed through proper policies, ethical practices, international cooperation, and equal access to digital technology. This can help Nepal achieve sustainable technological and economic development.
